

# Ingesting Streaming Data into Power BI

---

**Warner Chaves**

MS DATA PLATFORM MVP

@warchav sqlturbo.com

# What's in this module?

**Power BI Streaming Fundamentals**

**Types of Real-time Datasets**

**Creating a Real-time Dataset on  
PowerBI.com**

**Pushing the Stream Analytics data to  
Power BI through the native integration**

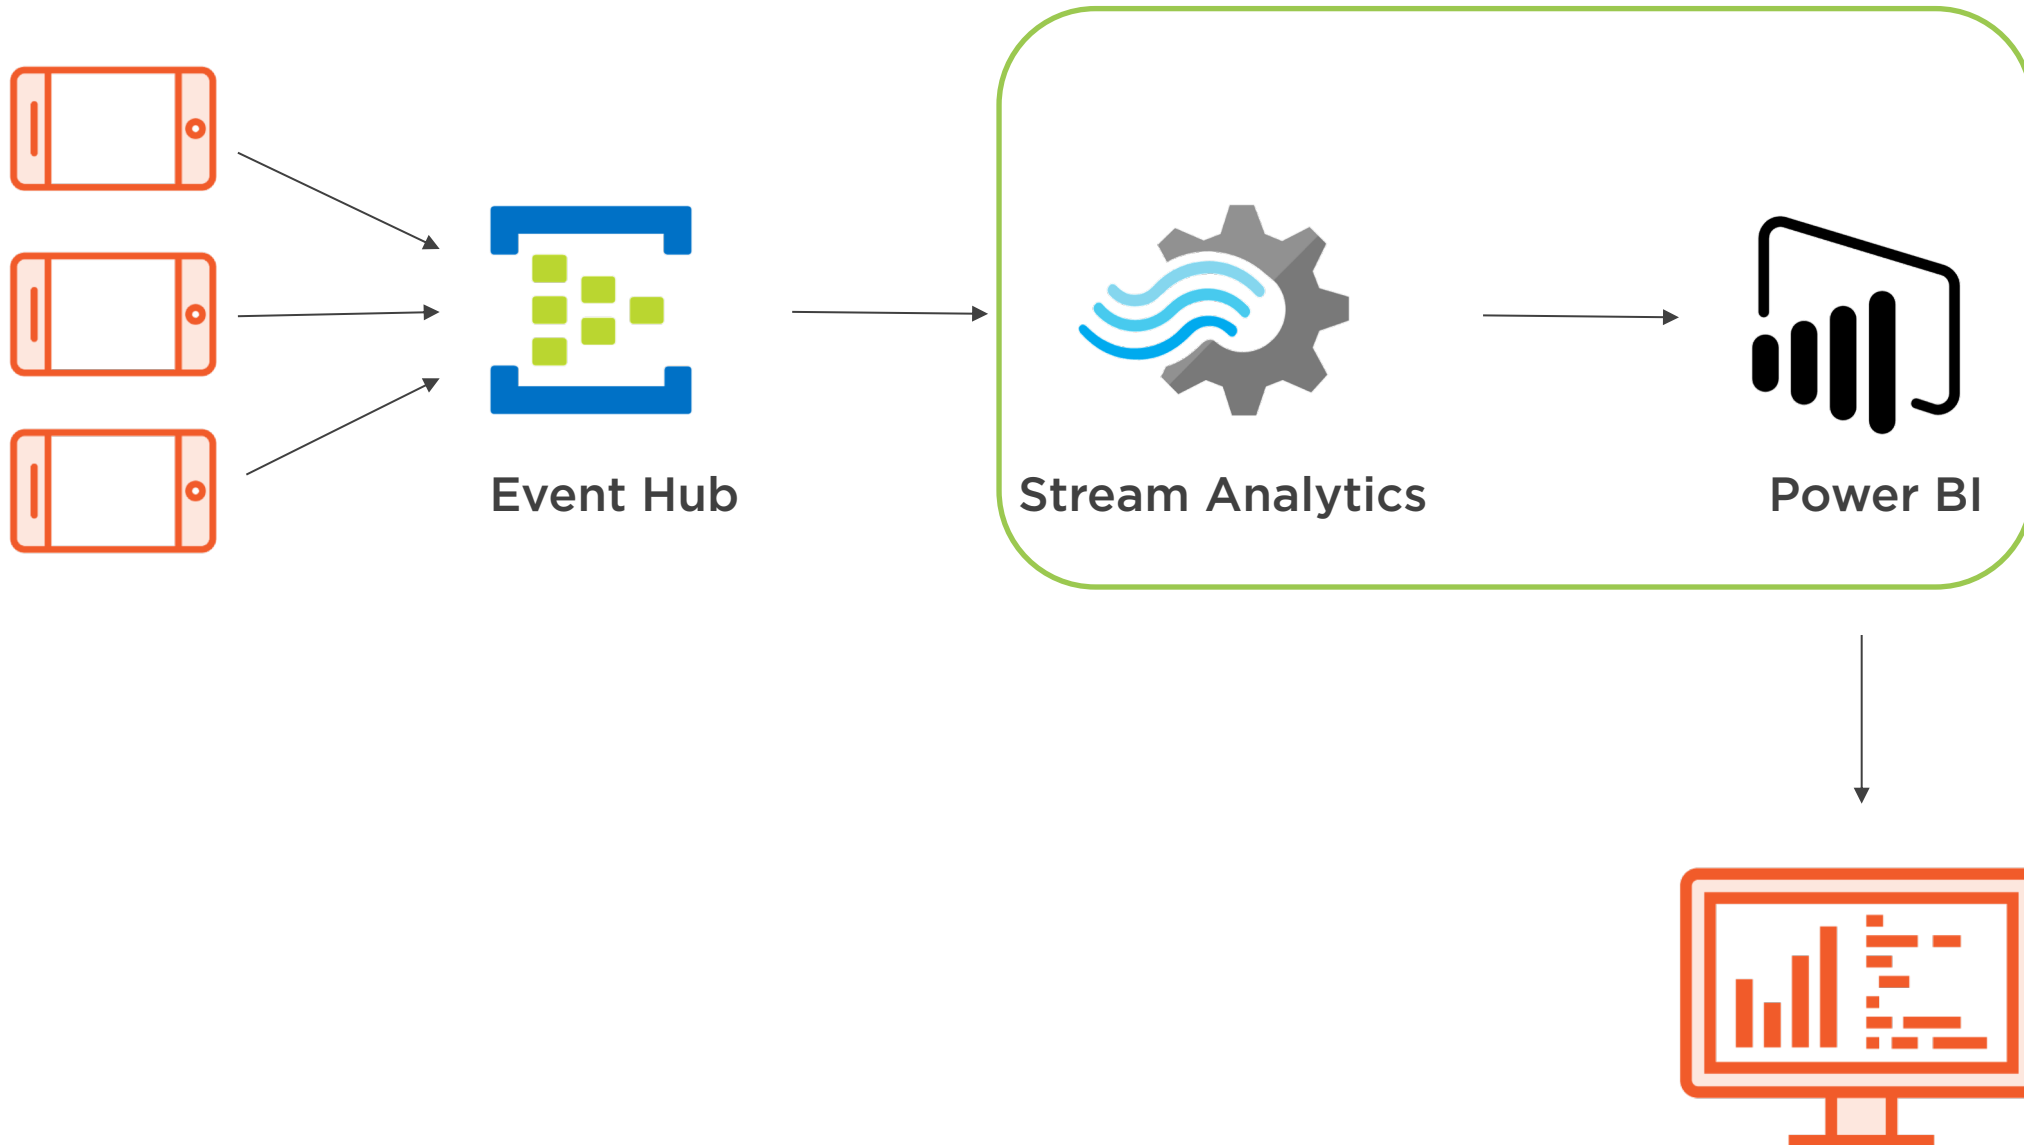

### 3. Microsoft Power BI

Rich self-service reports and dashboards

# Why Power BI?

# Power BI and Real-time data

**Azure Integration**

**Native real-time data  
support**

**Visualization  
Experience**

For more Power BI learning material please refer to  
the Pluralsight course library.

How do we get started?

# Real-time Datasets

**Streaming Dataset**

**Push Dataset**

# Streaming Dataset

**Supports very fast dashboard tiles**

**Limited graphics options**

**Uses a Redis cache under the covers**

**Keeps approximately 1 hour of data**

## Push Dataset

**Supports regular report creation**

**All graphics supported**

**Refresh rate is slower (~5 secs)**

**Uses Azure SQL Database under the covers**

**Keeps history of 200,000 records**

# PushStreaming Dataset

**Streaming Dataset**

**Push Dataset**

# Push or Streaming?

Create either one through the  
REST API

Create both with the  
PushStreaming dataset

Stream Analytics creates a  
PushStreaming FIFO dataset

Recommended to do  
PushStreaming or Push

# Sending Directly to Power BI

If you have low data volume and don't need Event Hubs or Stream Analytics, you can write code that pushes data directly through Power BI's REST API.

Creating a Power BI real-time dataset is supported through the REST API or the website, not on Power BI Desktop.

# Demo

Creating a real-time dataset through  
the Power BI website

Let's continue building our  
solution!

# Machinery Temperature Monitoring

We have aggregated the temperature readings and added reference information to them

We want users to visualize and receive alerts on this data in real-time

# Stream Analytics Integration

Stream Analytics

Power BI

**The Azure Portal has a built-in integration that will create a PushStreaming dataset for your Stream Analytics output.**

# Demo

Creating a streaming dataset through  
the Stream Analytics portal

What if you need to modify  
the real-time dataset?

# Modifying the Dataset

If the modification is a new column calculation or needs to flow to multiple outputs

If the modification is to add a PowerBI Measure to the dataset

# Solution Modification

**We will add the text version of the temperature timestamp to the Stream Analytics job.**

# Demo

## Modifying a real-time dataset

## Summary

Power BI supports self-service reporting with real-time data

There are streaming, push and push-streaming datasets

You can create a real-time dataset through the Power BI site or the Stream Analytics integration

At this point in our solution, we have the Stream Analytics job outputting data into our Power BI dataset

# Next Module:

## Building Real-Time Visualizations with Power BI
